MERENDA

VENEER EDGEBANDING

A close-up photograph of industrial machinery used for veneer processing. In the foreground, several wide, light-colored veneer strips are being fed through a series of rollers. Above the rollers, a horizontal metal bar with two white plastic guides is visible. The background is dark and out of focus, showing more industrial equipment.

veneer edgebanding

“WE GET REALLY GOOD SERVICE FROM MERENDA,
THE LEAD TIMES ARE COMPETITIVELY SHORT
WHICH IS CRITICAL FOR US.”

“**The edging supplied** has varied in species and widths from 22mm to 50mm and anywhere in between. They have always delivered the material to us on schedule and on budget with the quality always being excellent which I know is something they place a lot of emphasis on being one of the main manufacturers of veneer furniture components in the British Isles.”

“**We have found** them to be extremely professional and flexible to our changing requirements at all times. Allison our account manager, is very easy to deal with and we always find her input to be professional and co-operative. With all this said, I have no hesitation in recommending Merenda for any types of edgebanding mentioned above.”

About Merenda Surface

What is it

Merenda Surface offers a bespoke veneer solution for any furniture component that may exist within a space; whether it's for wall panelling, doors, gables, door frames, doorsets, or kitchen cabinets- if it's got a surface Merenda can veneer it.

Why choose us

Many companies do not have the facilities or the expertise in processing veneer- Merenda do! We have spent the last 30+ years in resolving design led challenges around veneer. We are known within the industry as experts in natural veneer and also specialise in using dyed veneers like Tabu and Alpi.

Value

We can take a difficult design specification and resolve it by offering a bespoke veneer solution. Our clients appreciate the flexibility of Merenda products that allow many different veneer components to seamlessly join together for an exceptionally high-end finish to their projects. Through doing this, we take the specialist pain away, problem solve complex veneer joinery issues, helping them save significant time and money.
